

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

XV. *Extract of a Letter from Sir Charles Blagden, Knt.
Sec. R. S. to Sir Joseph Banks, Bart. P. R. S. giving some
Account of the Tides at Naples.*

Read May 2, 1793.

Rome, March 30, 1793.

I took some pains at Naples to get information about the state of the tides, but could learn nothing satisfactory. The quantity of rise and fall is so little, that unless the sea be very calm, it is impossible to make a good observation. One of the best places for ascertaining the phænomena would be at what they call the river Styx, which is a narrow communication between the Porto di Miseno and the Mare Morto. Here I learned very distinctly that the water sometimes ran in, and sometimes out, but could not get the times; when I was there it was running out. The best observation I had was on the 2d of March, when it appeared to be high water at Naples about eleven in the forenoon, and low water between five and six in the afternoon; with a difference of pretty exactly one foot in the height. The wind blew the same way all the time, and the sea was very little agitated. On the preceding day the water had sunk an inch or two lower. From this observation, as well as some others less accurate, I concluded the time of high water at full and change to be between nine and ten o'clock, in the Bay of Naples.

I am, &c.

C. BLAGDEN.
